CRT

TMT
Multi-Modal
Transportation

Shanghai Tieyang Multimodal Transportation Co., Ltd.(TMT) is a cross-border multimodal transport logistic solution provider specializing in railway under the China Railway Container Transportation System.

Based on the shareholders' resources and strategic deployment of CRT, TMT actively expands the business of specialized container transportation and further develops cross-border transportation services for railways.

TMT Core Logistics Service Network

Corridor via Caspian Sea & Black Sea(CN-EN) CRT

TMT
Multi-Modal
Transportation

Intro, Advantages & Disadvantages

CRT

TMT
Multi-Modal
Transportation

- Public train, operating steadily on weekly basis.
- 'Rail-Sea-Rail-Sea/Rail' multi-modal transportation mode, following the route of the 'One Belt One Road' South corridor, with total distance of over 8000 kilometers and transit time of 15-17 days.
- Container & cargo collection from all over P.R.C. The public train departs from Khorgos and arrives at Aktau via Kazakhstan; From Aktau to Baku by sea, and thereafter arrives at Tbilisi/Poti by rail.
- Cargoes can be transferred to international railway at Tbilisi leading to Istanbul/Türkiye and other regions; Alternatively can be exported by sea from Poti to Istanbul, Burgas, and Constanta via the Black Sea, then further connected to international rail trains to the hinterland of Europe.
- The transportation service chain can be extended through sea freight, Port-to-Port logistics services from Poti to major European ports can be realized.

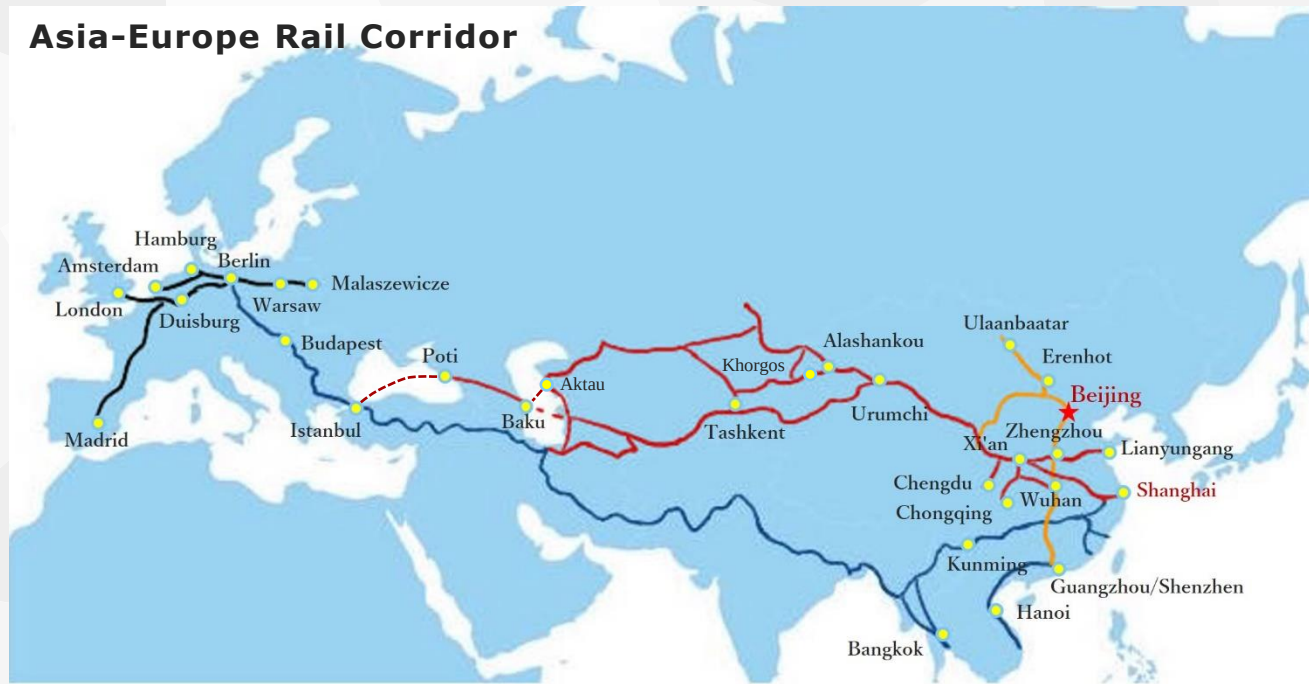

- ❑ **Cargo collection from all over P.R.C**
- ❑ **Comprehensive route options**

- **Shipping schedules of Caspian Sea and Black Sea restriction**
- **Weather conditions influence**

- ❑ **Dependable Route**
- ❑ **Reliable timeliness**
- ❑ **Adequate space**

- **Multiple changes in transportation models**
- **Relatively long delivery time to EU hinterland**

Asia-Europe Rail Corridor

✓ **Export:** From China domestic major cities to Mongolia, Central Asia, ASEAN countries and European countries via the Chinese land ports by cross-border rail transportation

✓ **Import:** From Central Asia, Europe, Mongolia and ASEAN countries to China via the Chinese land ports by cross-border rail transportation

Advantages of CRE Container

CRT

TMT
Multi-Modal
Transportation

Container Pickup

Multiple yards for container pickup in Europe (not limited to the railway stations radiating areas of Duisburg, Hamburg and Mala). Truck distribution cost could be decreased for customer.

(For detailed container inventory information, please refer to the WeChat official account of TMT.)

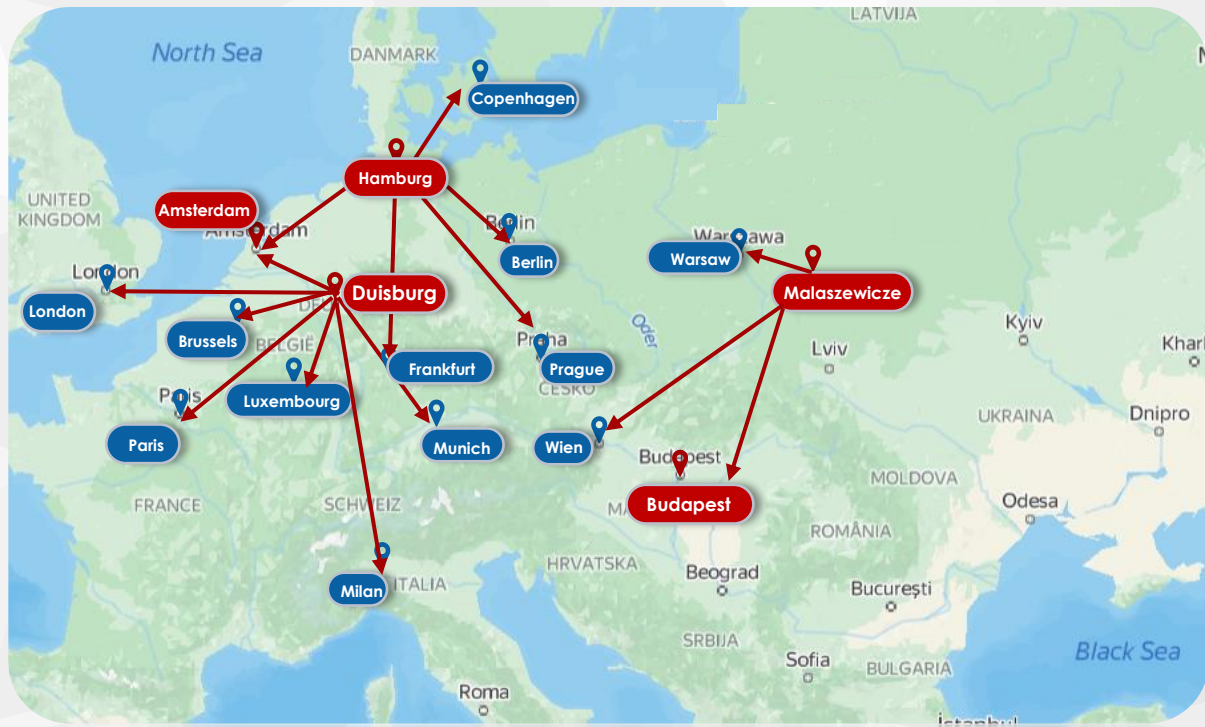

Container Return

Empty container return to ANY railway station in China domestic area.

(Transported back to China by rail)

Overview and Analysis of Common International Road Transport Modes

CRT

TMT
Multi-Modal
Transportation

Overseas Reloading

SOP

- IRT vehicles loading domestically and transport to the port.
- IRT vehicles declaring and sealing for export at the port.
- Reloading overseas vehicles at overseas ports, handling customs transfer and cross-border transit procedures.
- Customs clearance at the designated location and unloading at the destination.

Advantages & Disadvantages

- ✓ No restrictions on the types & ports of DG cargo reloading.
- * Full process compliance operation (when crossing one or more countries, the customs authorities of each country implement their own control and transit procedures)

International One-Stop

SOP

- IRT vehicles loading domestically and transport to the port.
- IRT vehicles declaring and sealing for export at the port.
- IRT vehicles handling customs transfer and cross-border transit procedures at overseas ports.
- Customs clearance at the designated location and unloading at the destination.

Advantages & Disadvantages

- ✓ No reloading, high efficiency
- * Full process compliance operation (when crossing one or more countries, the customs authorities of each country implement their own control and transit procedures)

TIR Mode

SOP

- TIR vehicles loading, then declaring and sealing for export at the departure location.
- TIR vehicles directly releasing for passage from the port inspection.
- TIR vehicles handling customs transfer and cross-border transit procedures at overseas ports.
- Customs clearance at the designated location and unloading at the destination.

Advantages & Disadvantages

- ✓ No reloading, high efficiency
- ✓ Compliance Operation/ IRU Customs Guarantee
- ✓ Convenient Cross border Transport/ No Customs Inspection

Truck - Rail

SOP

- Domestic containers loading in accordance with the overseas railway packing standards.
- IRT container trailer transporting to the Kazakhstan railway dedicated lines.
- Customs clearance and delivery after railway transportation to the destination.

Advantages & Disadvantages

- ✓ Cargoes of those cannot be directly exported by railway domestically can be handled, e.g. DG cargo etc.
- * Reloading leads to low efficiency.

Features of TIR Mode

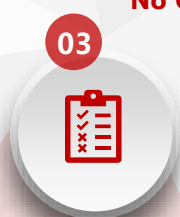

No Reloading/Faster Delivery

Direct transport to destination after sealing by the customs at the departure place.
One-stop door-to-door road transport by One vehicle to the end.

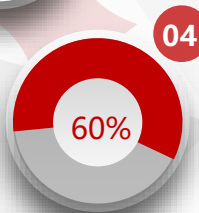

Compliance Operation/ IRU Customs Guarantee

The TIR system has strict carrier qualification requirements and enjoys a customs tax guarantee of up to 100,000 euros.

Convenient Cross Border Transport/ No Customs Inspection

One-time sealing; status trackable.
The TIR advantage as high transit efficiency with safety guarantee.

Up to 60% Saving of Transit Time

TIR facilitates the transit customs clearance and improves the efficiency of international road transportation.
In over 70 years of practice, the TIR transportation model has saved up to 58% of transit time and 38% of transport costs for both consignee & consignor.

At present, the trucks utilized in TIR transportation in China are mainly of 13.5meter (45 ft) trailers or refrigerated trailers equipped with three axes.

Introduction:

- TMT launches the Overseas Export Shipping Project of Fully Assembled Vehicles from **Shekou/Guangdong to Genoa/Italy** by FLAT RACK in January, 2023.
- **Cargo Name:** Blade Electric Vehicles (containing lithium batteries)
- **Length of Vehicle:** 8.5m/10.5m

After taking 30 days for the whole journey, this batch of vehicles successfully arrived at Genoa Port/Italy and was transported to the final destination after customs clearance.

The FLAT RACK shipping transport project provides the customer with a new model of transportation solution, and partially serves as the alternative solution for the cross-border transportation of both cargo with batteries and out-of-gauge cargoes.

Vietnam-China-Kyrgyzstan Block Train Transit Transport

Introduction:

- TMT launched new logistics product from Vietnam to Central Asia via China Nanning.
- Leadtime of trial run is 20 days, saving about 32 days for customer compared with traditional solution by sea-rail modal via Lianyungang/Qingdao.
- The trial run was made by joint efforts between TMT and MSK CBR team. TMT streamline the China customs transit process and combine the two rail legs, and MSK CBR team provide customer innovative and efficient solution.

Overweight and Oversize Cargo Transportation

CRT

TMT

TMT Key Customer Performance — HUAWEI

CRT

TMT
Multi-Modal
Transportation

Service Type:

Comprehensive Railway Transport Service Provider

Introduction:

- HUAWEI, as the leading enterprise in communication devices, take advantage of railway transport products to Central Asia, Mongolia, Vietnam, Nepal and Europe etc.
- TMT provides the customized block train service from Shenzhen/Zhengzhou – Central Asia.
- TMT is honorably given the **“BEST COLLABORATION AWARD”** by Huawei in April 2023.
- TMT has been awarded with the honor of HUAWEI Annual Outstanding Supplier of Railway Transport in 2015& 2016 constantly.

TMT Success Stories— South Corridor Transportation Project (Chongqing-Baku)

Introduction:

- **Cargo Type:** Polyester Section
- **Quantity:** Whole Train 20GP
- **Transit Route:** Chongqing, PRC- Khorgos – Aktau, Kazakhstan – Baku, Azerbaidzhan

• Characters:

On May 29th, 2024, this batch of polyester section was transported from Chongqing to Baku/Azerbaijan crossing Caspian Sea by Rail-Sea intermodal transportation model, with the total transit time of 20 days.

Encountering with the FIRST launch of the 'YuXinOu Chongqing-Baku Route', by the joint efforts of TMT shareholders, the YXO platform company, the customer and TMT team, the project was successfully delivered on timely basis.

Currently, the transportation demands on the CN-EU Railway Express South Corridor are growing vigorously all over the country. In the upcoming days TMT will continue to explore more potential cargo transportation needs and actively participate in the development of the CR Express South Corridor.

Introduction:

- **Cargo Type:** New Energy Vehicles
- **Quantity:** 8x40HQ, 24 Sets of New Energy Vehicles
- **Transit Route:** Xi'an-Khorgos-Baku

Characters:

On Jun 7th, 2024, this batch of new energy vehicles left from Xi'an to Baku via Khorgos port with whole transportation efficiency as 16 days.

This batch of vehicles involved various models of multiple brands, the non-unified size & weight parameters and the lithium batteries equipped by the cars both made the packing & loading proposal more difficult. In response to the customer's request for simultaneous transportation of the cargo, TMT improved and optimized the packing solution to ensure matching with the block train transportation schedule. To reduce the client's pressure of detention which might be brought by the port congestion, TMT paid high attention to the cargo collection of the target schedule, and made timely arrangements for empty pick-up, stuffing and stations entrance to help the customer reduce their cost and increase their efficiency simultaneously.

TMT Success Stories

—Central Asia Exports Project by Truck

Introduction:

- **Cargo Type:** New Energy Storage Cabinet
- **Quantity:** Nearly 100 Sets
- **Transit Route:** Guangdong – Alashankou/Khorgos – Dostyk/Altynkol, Kazakhstan - Yallama, Kazakhstan - Kokand, Uzbekistan

- **Characters:**

The cargoes were carried by truck via Alashankou/Khorgos to Central Asian countries in batches between Jun to Aug 2024, the average delivery time was round 24 days.

Based on the special characteristics of the cargoes, this project was executed by Class IX Dangerous Goods container trailer. Supplementally to prevent the external packing from being damaged during the transportation, TMT opted to use the windbreaks/netting for additional reinforcement. The shortage of transportation resources for both domestic and overseas was encountered due to centralized shipment demand, TMT coordinated the transportation resources within a short period of time and actively cooperated with the customer which finally ensure the project delivery.

Introduction:

- **Cargo Type:** Feed Wheat Flour
- **Quantity:** Whole Train 40HQ
- **Transit Route:** Kustanai, Kazakhstan – Khorgos – Gaoyi, Shijiazhuang by rail

• Characters:

After arriving in China via Khorgos port in Sep 2024, the cargo was transported to Shijiazhuang Gaoyi railway station, thereafter further distributed to other domestic destinations by rail.

Before the cargo dispatch, TMT carefully checked the full set of customs declaration documents, accompanying documents, certificates and labels, and cautiously supervised the packing process to prevent off-center loading. In terms of the application for the rail route & wagon plan, TMT and Shijiazhuang platform company pulled together to meet the project's needs.

The “Nongzhong-Almaty” China-Europe International Rail Reefer Block Train Project

Introduction:

- The 1st China-Europe international railway reefer block train (“Nongzhong-Almaty”) was successfully launched on August 31st 2017. With the 45’ reefer and technical support provided by China Railway Tielong, TMT acts as the international multi-modal logistics service provider in the project.
- **Project Overview:** the block train composed of 40 rail wagons was equipped by the new 45’ rail reefer container of CRT, carried the fresh garlic produced in Shandong Jinxiang, which worth 12 million RMB yuan, to leave for Almaty of Kazakhstan via Alashankou (Xinjiang). The block train was planned to travel about 5,000 kilometers and spent 9 days before arrival at the destination.

Introduction:

- **Cargo type:** Blade Electric Bus
- **Quantity:** 8.5m blade electric bus: 8 units
10.5m blade electric bus: 6 units
- **Transit Route:** from factory to Shekou Port/China, to final destination Genoa Port/Italy
- **Characters:**

With the agreed departure date before the 2023 Chinese New Year, the out-of-gauge and high-value cargo met certain difficulties in cargo packing and loading. At the same time, the new energy car carries its own lithium battery, which is classified as Dangerous Goods in transportation. The whole procedures at the transit chain are time-sensitive due to above reasons. According to the market conditions of transportation before the new year holiday, TMT proposed the solution that the cargo being stowed below by FLAT RACK as to meet the customer's requests of shipping schedule, cargo safety and transportation timeliness as a whole.

Introduction:

- **Cargo Type:** LCD & Parts
- **Transit Route:** Chengdu – Shanghai by rail, and Shanghai – Gdansk by sea
- **Quantity:** 41*40' as trial run
- **Characters:**

TMT use the intermodal sea-rail product provided by Maersk and the through bill model to provide customer with end to end service. The target lead time is 50days from door to door. Cooperated with Sichuan Railway, we use domestic rail from Chengdu to Shanghai/Ningbo port, then transfer to Maersk vessel from Shanghai/Ningbo to Gdansk Port.

The cargoes of the project are light and valuable, the customer values timeliness. TMT and Maersk teams efficiently connect the rail and sea transportation, fully implement local customs clearance issues, and meet customers' requirements on capacity, shipping schedule, cargo safety and transit time.
